

Life Sciences & Biotechnology

Overview

Legal services we provide to clients in the fields of life science and biotechnology include general services that are important to all start-up and operating businesses, especially within this field. For example, our corporate attorneys assist clients with joint ventures, strategic alliances, venture capital financing and mergers and acquisitions, allowing a company to grow and secure the necessary funding to conduct research and turn breakthroughs into real products.

We also provide services specific to biotechnology and life sciences. These services include intellectual property and patent management, as well as guidance in complying with clinical trial requirements, public policy advocacy services and technology licensing matters.

In addition, our tax attorneys assist clients in selecting the proper business structure and with other income tax and profit-related issues. Tax advice can be especially important for start-up companies who need to choose the right business entity both for tax purposes and liability protection.

Biotechnology and life sciences is a competitive and fast-changing industry and one subject to heavy regulation. It is important to obtain experienced legal advice to make the right decisions. We will help you to respond to any legal question or issue that arises.
